 silviculture

1. A regeneration technique that removes all of the trees regardless of size.

2. A regeneration technique designed to create an uneven aged forest. Trees may be removed singly or in small groups.

3. The art, science, and practice of establishing, tending, and reproducing forest stands.

4. A timber harvesting treatment in which all trees over a specified diameter may be cut.

5. A type of timber harvesting technique in which larger trees of commercially valuable species are removed with little regard for the quality and regeneration of the site.
