The computer database system program was developed by Star-Dot-Star Consulting, 230 Armagast Road,  
Bellefonte, PA 16823.

## INTRODUCTION

The Penn State University Soil Characterization Laboratory Database System is PC-based, uses Clipper-compiled dBase language, and runs from DOS. The system requires 2 megabytes of disk space and runs on 640K RAM memory. With the 800 pedons of Pennsylvania data, the system plus data takes up 13 megabytes of disk space. The dBase data management program is not necessary to run the system; but if available, it can also be used to manage the files. Figure 1 gives a schematic of the system. The system is menu-driven and very user-friendly.

The characterization database system uses the USDA Soil Conservation Service (SCS) field data forms and pedon coding system in the site and horizon data files. Field data codes and raw laboratory data are interactively entered (see Appendix A for codes and forms). The system includes a calculation program that converts the raw laboratory data to the final data and automatically enters it into the database (Figure 1).

A service database with a structure identical to the soil characterization database is included in the system to handle any data that is not to be included in the soil characterization database. Except where noted, the commands for the characterization and the service databases are identical.

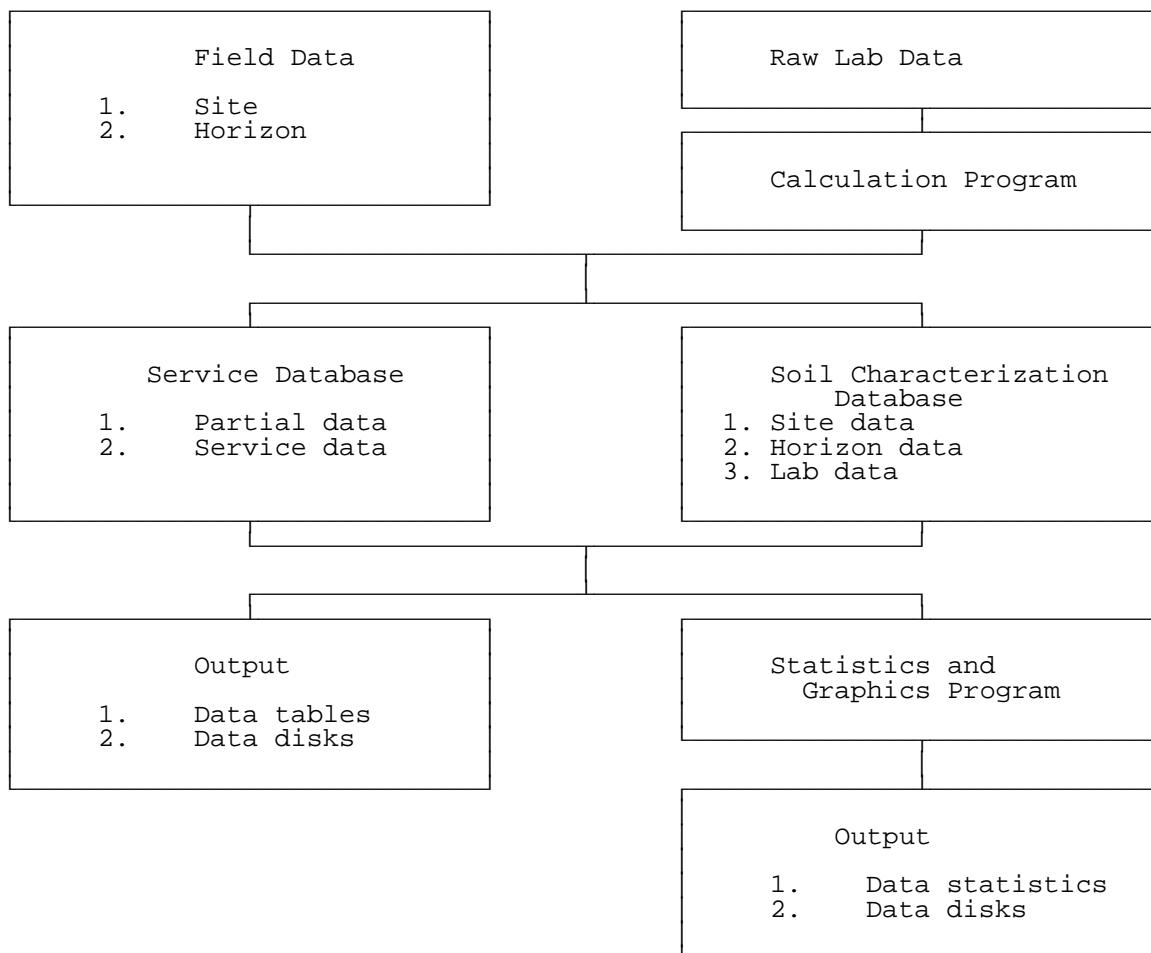

Figure 1. Schematic diagram of the Penn State Soil Characterization Laboratory database system.

## **STARTING THE PROGRAM**

If you have not installed the program on your computer, refer to the installation instructions that accompany the program disks. To start the program, enter the drive that contains the program. The following start-up commands assume that the program is located in the PEDON directory on the C drive:

```
C:\> cd \Pedon <enter>
C:\pedon> menu <enter>
```

The system comes up on the screen with a password window (Figure 2). Type the password and press <enter>. You may also access the system by pressing <enter> without a password, but you will not be able to edit or enter data.

The main system menu (Figure 3) that follows the password window lists the following selections:

- (1) Soil Characterization Data and Service Data
  - (a) add, edit, delete or view data;
  - (b) export data to another file;
  - (c) send a narrative report to a printer or another file.
- (2) Code Files -- edit data codes.
- (3) System Defaults -- change the printer defaults.
- (4) Quit -- exit the system and return to DOS.

Use the up and down cursor arrows to move the highlight bar to the desired menu item and press <enter> to select the option.

## **DATA ENTRY**

Use the cursor keys to highlight the "Soil Characterization Data" option on the main system menu and press <enter>. The soil characterization data menu will appear on the screen (Figure 4). Highlight "Site, Horizon & Laboratory Data" and press <enter>.

The data entry (site, horizon, lab, and lab input) submenu (Figure 5) provides access to four entry screen files (Site, Horizon, Lab, and Inputlab), each with a series of screens or pages (note that labinput and inputlab are used as identical terms in the system). The data screen and corresponding internal data files within the system are as follows: Site - Sitedata; Horizon - Horidata; Lab - Labdata; and Inputlab - Labinput. Any file can also be accessed from the screen top menu of the entry screens (Figure 6).

Use the cursor keys to highlight the desired screen selection and press <enter> to open the screen and data files. The "Narrative Report" selection on the submenu (Figure 5) will be discussed later. "Quit" returns to the main (or previous) menu. The Quit selection can be made in one of the following three ways from any menu:

- (1) Use the cursor keys to highlight "Quit" on the menu and press <enter>;
- (2) Type the letter "Q";
- (3) Press the <esc> key.

These commands will back you out of most screens and situations.

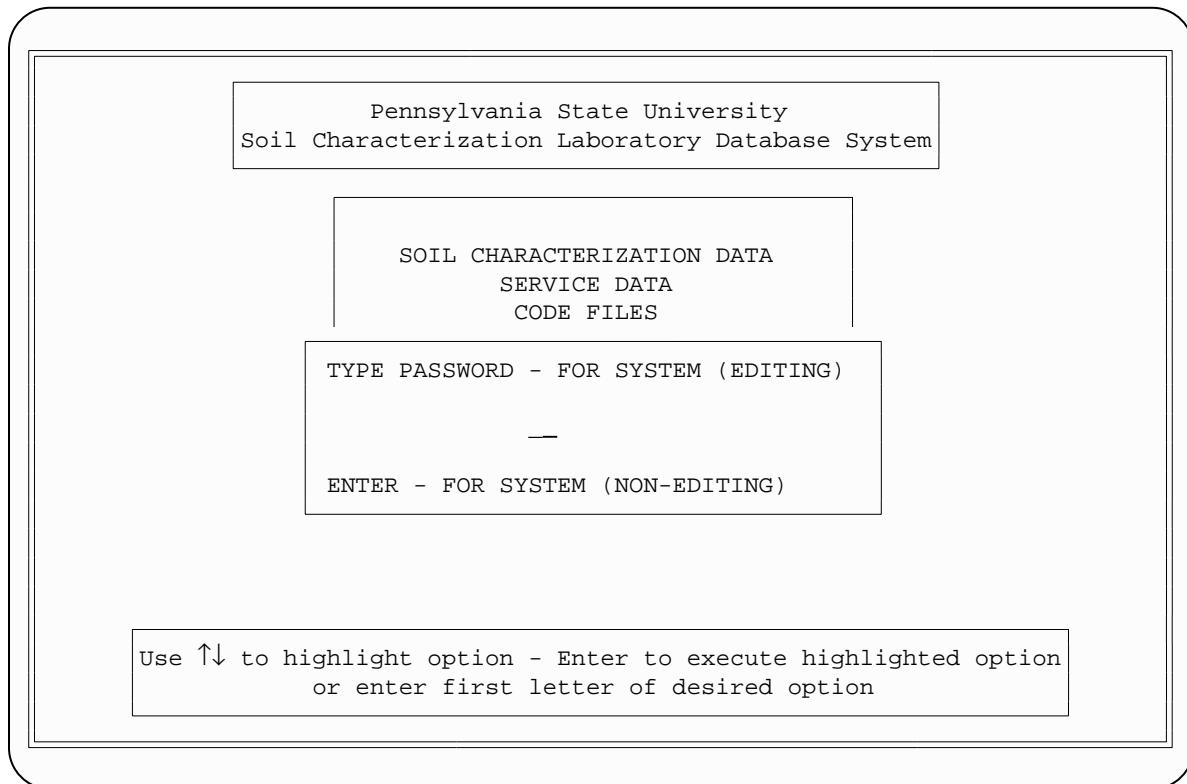

Figure 2. Password window screen for the database system

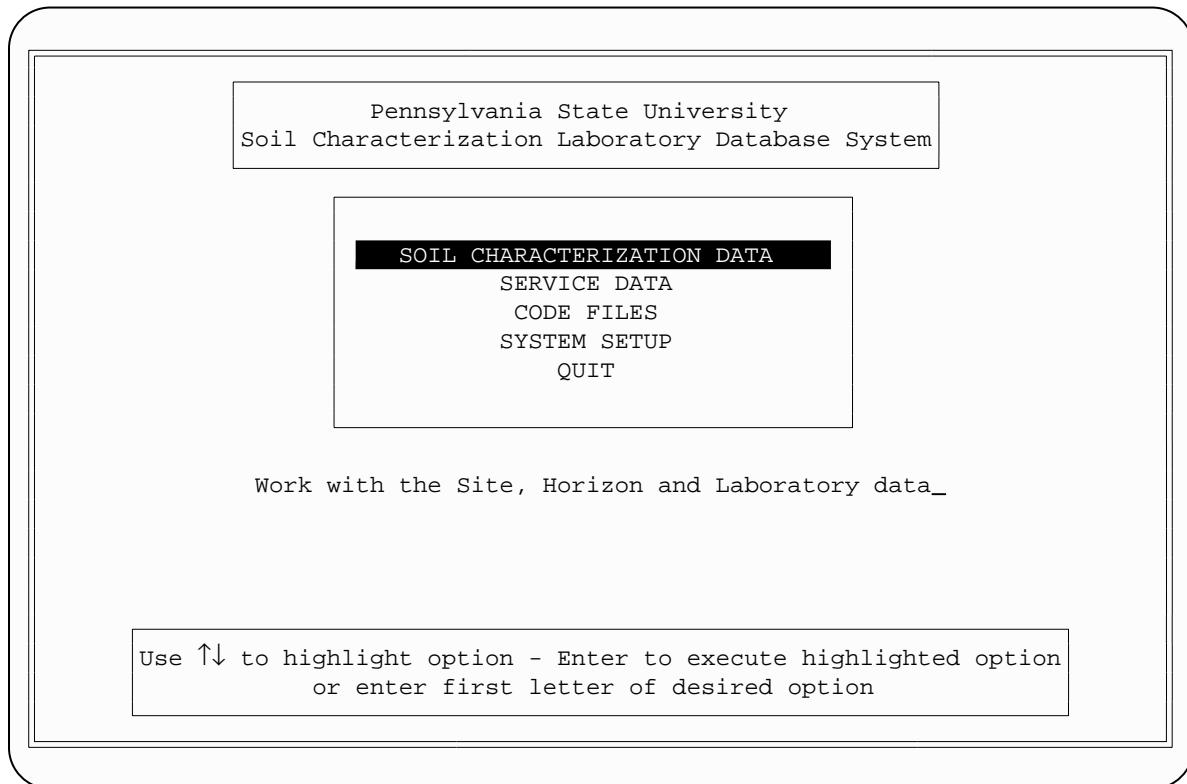

Figure 3. Main system menu screen for the database system

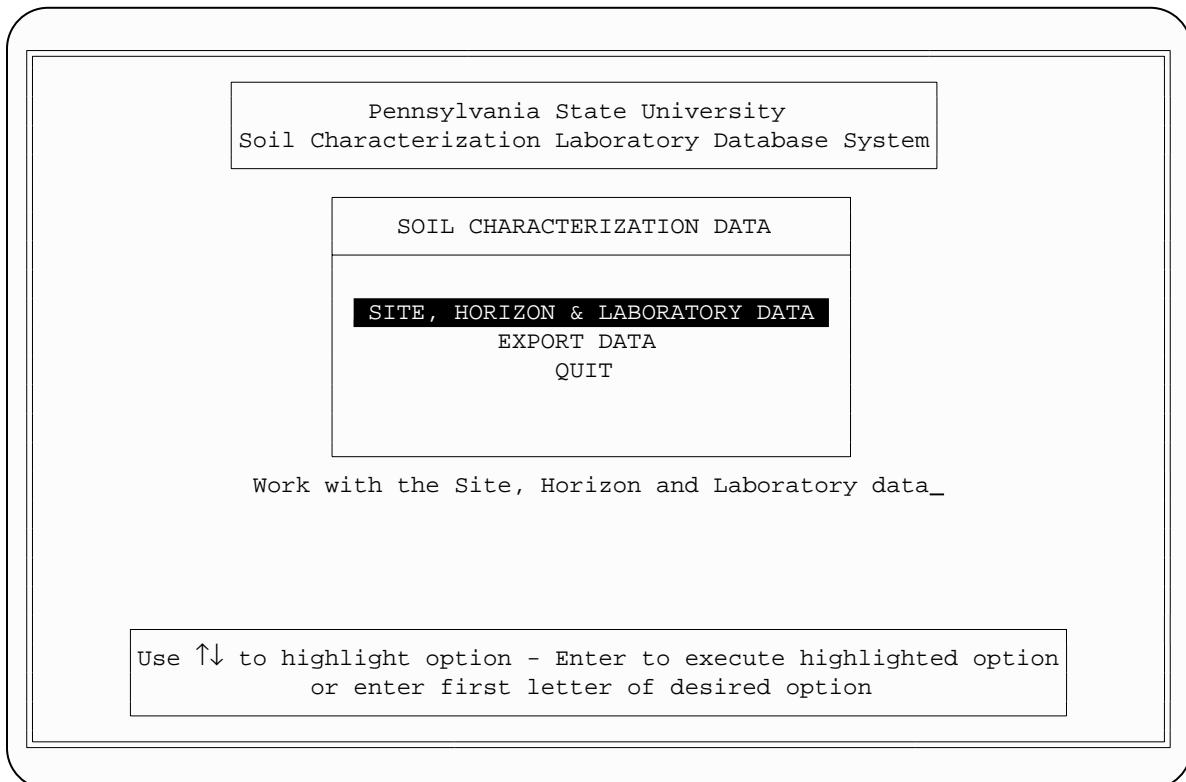

Figure 4. Soil characterization data menu screen for the database system

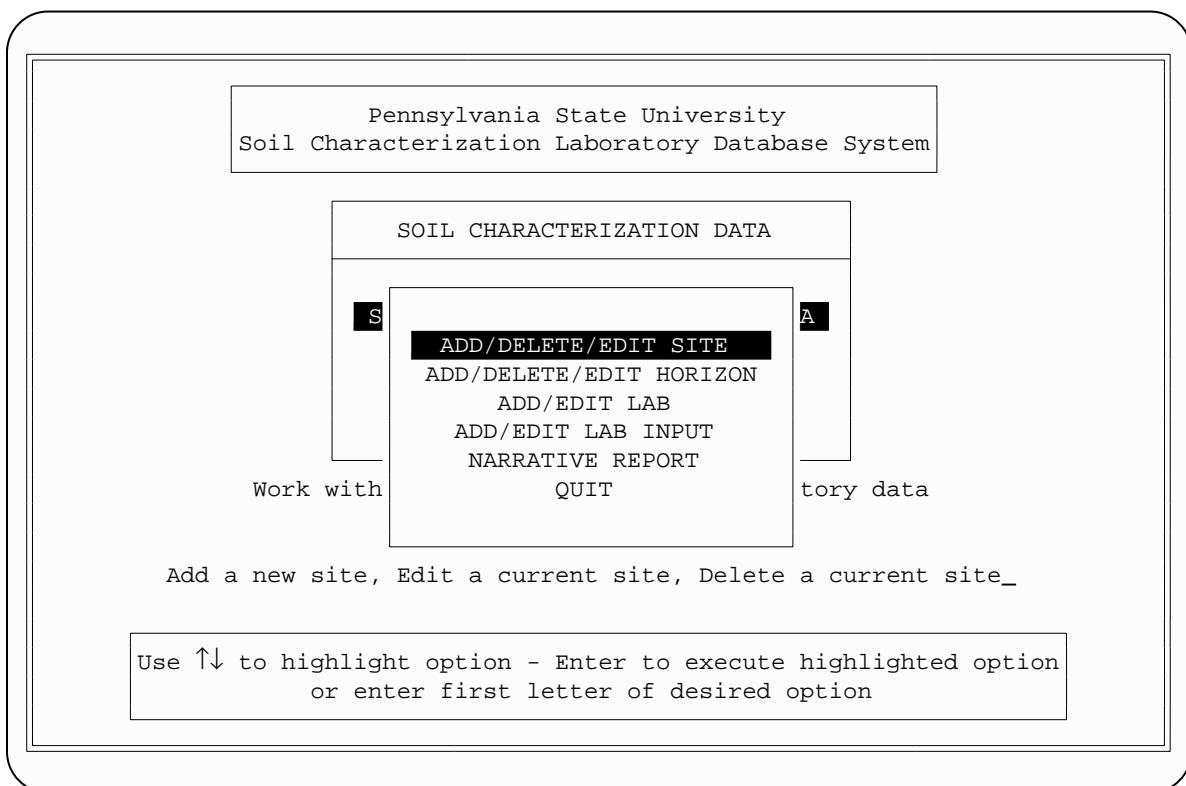

Figure 5. Data entry (site, horizon, lab, and lab input) and narrative report submenu screen for the database system

## A Data Entry Screen Features

To enter, edit, or view data in the characterization database, highlight one of the "Add/Delete/Edit" selections (site, horizon, lab, lab input) on the menu and press <enter>. The data entry screens for site (shown in Figure 6), horizon, lab, and lab input have certain common features. Menu features and conventions for selecting pedons, switching entry screens, moving through screen pages, data lines and fields, and exiting the systems are described below.

### 1. Top entry screen menu

The entry screen menu is displayed across the top of the entry screen, beginning in the upper left corner. A brief description of the menu option appears underneath the menu on the left side of the screen. Two methods to select menu options are available:

- a. Use the cursor arrow keys to highlight the desired menu selection and press <enter>.
- b. Press the key for the first letter of the menu item. For example, press the "A" key to select "Add."

### 2. Selecting pedons

Pedon information (series name, pedon unit identification, number of horizons) is displayed on the right side of the screen, immediately below the menu line. The menu offers three ways to select a pedon:

- a. **Goto** displays a pedon selection screen (Figure 7). Move the highlight bar to the desired pedon and press <enter>. The up and down cursor arrows move one pedon at a time; <page up> and <page down> keys move one screen page at a time; <home> moves to the top of the list; and <end> moves to the bottom of the list.  
Press <Alt> and "O" keys at the same time to change the sort order from pedon identification number to alphabetical soil series name.
- b. **Next** moves forward to the next pedon, or site, in the database listing (pedons are sorted by the State-County-Pedon Identification number).
- c. **Prev** (Previous) moves backward to the preceding pedon, or site, in the database listing.

### 3. Switching entry screens

Any data entry screen/ file can be accessed from the screen top menu of any other entry screen. Move the highlight to the desired entry screen name and press <enter> or simply type the first letter of the name (S for site, H for horizon, L for lab, I for input lab).

### 4. Paging through the entry screens

Site consists of 2 screen pages; Horizon has 4 pages; Lab has 5 pages; and Inputlab has 7 pages. Each screen page corresponds to a data form page (see Appendix A). The screen page number appears in the upper right corner of the screen. Use <Ctrl> plus <Page Up> and <Ctrl> plus <Page Down> to move forward or back one entry page.

Figure 7. Pedon selection menu screen using the Goto option.

## **5. Moving through screen lines and data fields**

- a. Use the <Page Up> and <Page Down> keys to move from one line to another on the entry screen.
- b. Use the <Home> key to move to the upper left field on a page and the <End> key to move to the lower right field on a page.
- c. Use the <Ctrl> plus left or right arrow keys to move laterally between the main data entry fields.
- d. Use the up arrow key to move right and the down arrow key to move left in a field such as LATITUDE that has more than one selection bar.
- e. Use the left and right arrow keys to move the cursor within a selection bar field.

## **6. Entering data**

- a. Left justify all data entry.
- b. Put leading zero's (0's) in the following fields:
  - (1) Date (01/01/91)
  - (2) Site (PA 001 001)
  - (3) Latitude and longitude (39 56 02) (077 16 39)
- c. Enter data around decimals (.) and dashes (-). Also enter the . and -.
- d. Use <Ctrl> plus <End> keys to record data. At the "Save these changes?" prompt, choose "Yes" or "No" and press <enter>. This will return you to the screen top menu.

## **7. Exiting the system**

The <Esc> key allows you to exit or back out of most situations. From the top screen menu, select "Quit" to return to the previous menu screen.

## **B. Site Data**

Select "Add/Delete/Edit Site" from the data entry and narrative report submenu (Figure 5) to add a new site, delete an existing site, or enter and edit site characteristics data. The site codes and a site data form are provided in Appendix A (A.1 - Site Codes; A.2 - Site Form).

### **1. Entering new site data**

Select "Add" from the screen top menu (Figure 6). A cursor will appear in the SITE ID field. SITE ID, SOIL SERIES, and DATE (mo/da/yr) must be entered before the site record will be saved to a file. The remaining site data can be entered at the same time or at a later time.

- a. SITE ID: Type the state abbreviation under ST (PA comes up automatically; type another state code over this or move to CNT with the down arrow key). Enter a county number (001, 027, etc.) under CNT, and the site number (001, 137, etc.) under UNI. The S can be used to make a subdivision of the site, e.g., two or more pedons out of the same soil pit or site. For most sites, S will be left blank. If a mistake is made in the SITE ID, press <Esc> and start over. Once entered, the SITE ID cannot be edited. Press <enter> to move to the next field.
- b. SOIL SERIES: For the soil characterization database a pick-list of soil series names will appear on the screen. Select a name from the list or add a new name in the space provided. To select a name on the pick-list, use the cursor arrow keys to highlight the name and press <enter>. To add a new name, press <enter> with the selection bar on the "add new series name" field. Type the new name in the blank field and press <enter>. Capitalize only the first letter of the SOIL SERIES name. The series pick-list does not appear for the service database. Instead, the cursor highlights the SOIL SERIES field. Enter the series or service name and press <enter>.
- c. Once the soil series name is entered, the cursor bar moves to DATE. Enter in which the pedon was described and sampled. After the date is entered, the remaining site data can be entered. Use capital letters for codes. Use the Sitecode file (Appendix A.1) for the correct codes and the S & D (Structure & Description) Sitedata file (Appendix B.1) for an additional explanation of the codes.
- d. Once the data is entered, press <Ctrl> plus <End> to save the site data and return to the top screen menu.

## **2. Editing existing site data**

- a. Use the "Goto" option on the top menu screen to select the site/pedon to be edited (see section A.2 - Selecting Pedons).
- b. The data on file for the selected site will appear on the screen. Select "Edit" from the top screen menu (section A.1). A cursor will appear in the SOIL SERIES field. Move the cursor to the desired data fields (see sections A.4 and A.5) and enter data (section A.6) by typing over the existing data.

## **3. Deleting a site record**

The entire site/pedon record (including site, horizon, lab, and lab input data) can be deleted from the site entry screen.

- a. Use the "Goto" option on the top menu screen to select the site/pedon to be deleted (see section A.2 - Selecting Pedons).
- b. The site data for the pedon to be deleted will appear on the screen. Select "Delete" from the top screen menu (section A.1). At the prompt "Do you really want to delete this site?" select "Yes." The site and associated horizon, lab, and lab input records will be deleted from the database and the cursor will return to the top screen menu.

## **C. Horizon Data**

Select "Add/Delete/Edit Horizon" from the data entry and narrative report submenu (Figure 5) to add horizons to an existing site, enter and edit horizon characteristics data, or delete

a horizon record. The horizon codes and horizon data forms are provided in Appendix A.3. The S & D (Structure & Description) Horidata file (Appendix B.2) provides an additional explanation of the codes.

## 1. Adding new horizons

Before adding new horizons or entering horizon data for a new pedon, the SITE ID, DATE, and SOIL SERIES name must first be added to the Sitedata file (see section B.1). This will add these data to the Goto listing. Once this has been done, enter the Horizon entry screen from the Site top screen menu (see section A.1) or by selecting "Add/Delete/Edit Horizon" from the main menu (Figure 5).

- a. **Add new horizons** to a site by selecting "Modify" from the screen top menu. A new screen top menu will appear. Move the selection bar to "Append" and press <enter>. Add as many horizons as required by pressing <enter> for each horizon. The number of horizons (e.g., 1-10) entered will be added automatically to the Sitedata file.
- b. **Save the newly added horizons** by selecting "Quit" from the "Modify" screen menu. At the prompt "Save these changes?" select "Yes" and the new horizon records will be saved to file.

## 2. Entering new horizon data

Enter new horizon data by selecting "Modify" from the top screen menu. When the new screen top menu appears, move the selection bar to "Edit" and press <enter>. A cursor will appear in the first horizon data field. Refer to sections A.4 and A.5 for cursor movement commands and to section A.6 for data entry conventions. In addition, the following data entry conventions will apply:

- a. Use the <Alt> plus H keys to enter data horizontally across the screen and <Alt> plus V to enter data vertically down the screen.
- b. Use all capital letters except for Horizon Sufx (suffix) and free form notes.
- c. For horizons in which a primary structure parts to a secondary structure (e.g., prismatic parting to subangular blocky), enter the primary structure shape (SHP) first, using capitalized letters. Use small case letters for the second structure shape to indicate that the first (primary) structure parts to the second structure.
- d. When two structures are found in a horizon (e.g., subangular blocky and prismatic) use capital letters for both structure shapes.
- e. Use the first rock fragment entry field to enter the kind (KD) and total quantity (percent) of rock fragments in the horizon. In the following rock fragment fields put in the percent and size (SZ) of the various size classes of rock fragments, starting with the largest size found in the soil horizon (see Appendix A.3 for proper codes).
- f. Save the new horizon data by selecting "Quit" from the "Modify" screen menu. At the prompt "Save these changes?" select "Yes."

## 3. Editing existing horizon data

- a. Use the "Goto" option on the top menu screen to select the site/pedon to be edited (see section A.2 - Selecting Pedons). The data on file will be shown on the screen.

- 
- 
- b. To insert a new horizon between two existing horizons select "Modify" from the top screen menu. When the new screen top menu appears, select "Insert." An indicator arrow will appear on the left side of the screen. Use the up and down cursor arrows to position the indicator where the new horizon is to be inserted and press <enter>. At the prompt "Do you really want to insert a horizon at the arrow?" select "Yes."
- c. To edit existing horizon data, follow the same steps described in section C.2 for entering new horizon data. Type the new data over the existing data.

#### 4. **Deleting horizon records**

- a. Use the "Goto" option on the top menu screen to select the site/pedon to be edited (see section A.2 - Selecting Pedons). The data on file will be shown on the screen.
- b. Select "Modify" from the screen top menu. When the new screen menu appears, select "Del" (Delete). A pair of asterisks (\*) will appear along the left side of the screen. Use the up and down cursor arrows to position the asterisks on the horizon to be deleted and press <enter>. At the prompt "Do you really want to delete the highlighted horizon?", select "Yes."
- c. When a marked horizon is deleted, all of the data associated with that particular horizon in the Horizon (Horidata), Lab (Labdata), and Inputlab (Labinput) files are deleted. This does not affect the Sitedata file.

#### D. **Lab and Lab Input Data**

The procedures and keys used to enter or edit laboratory data or raw laboratory data for calculations are the same as those used for horizon data (see sections C.2, C.3-a and C.3-c). Use the Lab data entry screen to enter laboratory data that have already been calculated and are in final form. Use the Lab Input data entry screen to enter raw laboratory data that needs to be calculated. The calculated data will automatically be entered into the Labdata file and will appear on the Lab data entry screen. A description of the Lab and Lab Input variables can be found in the S & D (Structure and Description) files for Labdata (Appendix B.3-a) and Labinput (Appendix B.3-b). Hard copies of the input forms to record raw laboratory data are provided in Appendix C.

## DATA OUTPUT

The data can be output in a hard copy, narrative report form (see Appendix D for an example) for individual sites, groups of sites, or for an entire county. Selected data can also be output to disk for use in an outside statistics and/or graphics program.

### **A Data Tables (Narrative Reports)**

The "Narrative Reports" selection can be made from the data entry and report submenu (Figure 5) or from any of the data entry screen top menus (Figure 6). The narrative report for a particular pedon consists of three parts: (1) site description; (2) horizon profile description; and (3) laboratory data tables. The three parts of the narrative report can be printed separately or in combination. Reports can be produced for an individual pedon, all of the pedons for a particular soil series, or all of the characterized pedons in a county. The narrative reports are normally directed to a printer. The reports can be directed to an ASCII file by changing the system printer setup (see the following section "System Setup"). An example narrative report can be found in Appendix D.

The laboratory table program has a feature that vertically squeezes the data printed for pedons with more than 14 horizons so that all of the data fits on two pages - one page for physical and one for chemical and mineralogical data (the system also allows you to override this feature if the number of horizons is such that the lines may overlap).

#### **1. Narrative reports for individual pedons**

- a. Choose the "Narrative Reports" option from the data entry and narrative report submenu (Figure 5). When the Selected Sites & Soils/ Selected Counties submenu appears on the screen, move the selection bar to "Selected Sites & Soils" (Figure 8) and press <enter>.
- b. A listing of individual pedons, sorted by pedon number (state-county-unit) will appear on the screen (Figure 9). Move the highlight bar to the desired pedon.
- c. Site, horizon and laboratory reports can be printed individually or in any combination by selecting the appropriate letter (letter options are displayed beside the pedon listing, as illustrated in Figure 9). Select any combination of reports for as many pedons as you desire and then press <enter> to send the reports to the printer.

#### **2. Narrative reports by soil series**

- a. Follow step 1-a above to bring up the pedon listing. Press <Alt> plus O to sort the listing alphabetically by soil series name. Move the highlight bar to the desired soil series. Select the reports for all of the pedon listings for that particular series and press <enter> to send the reports to the printer.

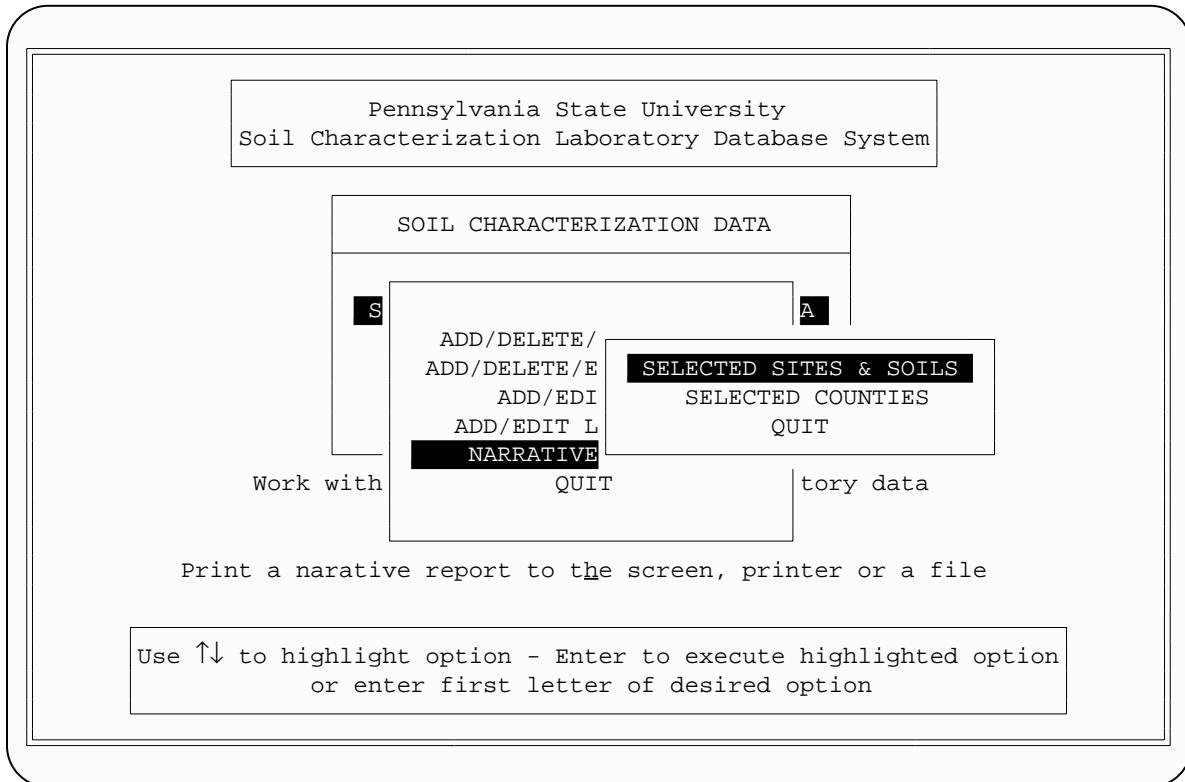

Figure 8. Selected Sites & Soils / Selected Counties narrative report menu.

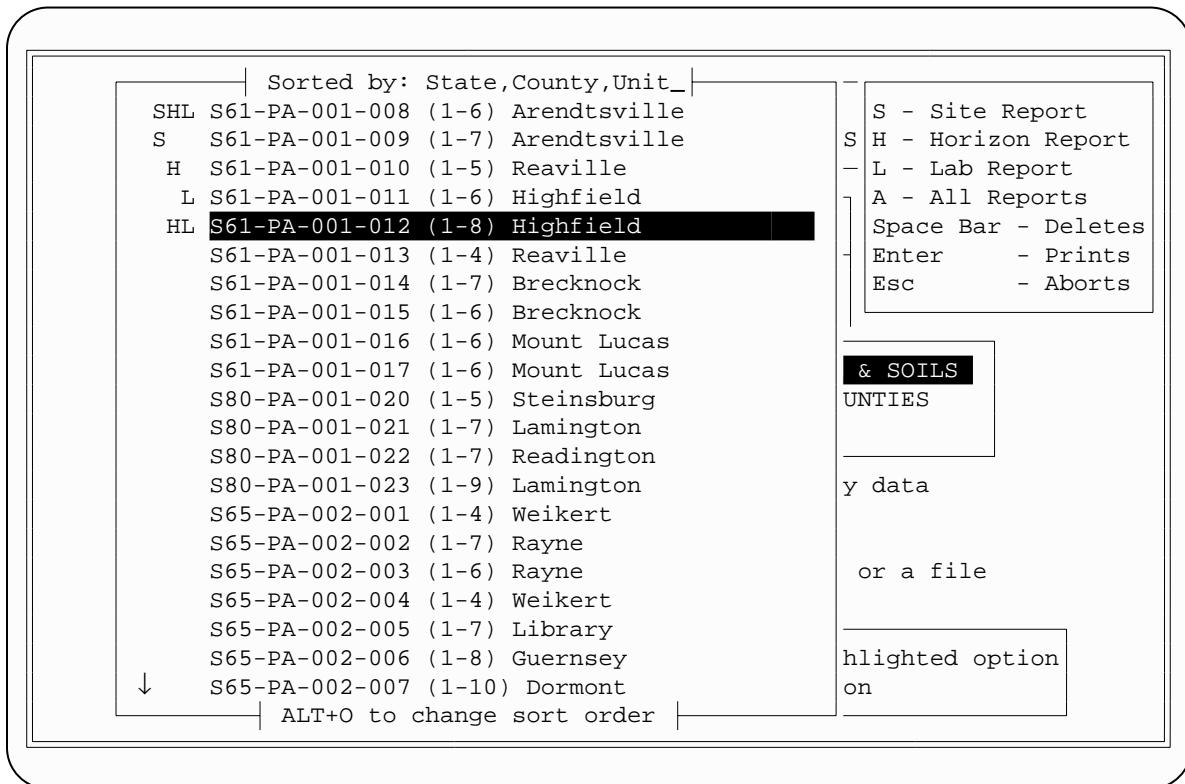

Figure 9. Screen showing part of the selected sites and soils list for narrative reports.

### **3. Narrative reports by county**

- a. Choose the "Narrative Reports" option from the data entry and narrative report submenu (Figure 5). When the Selected Sites & Soils/ Selected Counties submenu appears on the screen (Figure 8), move the selection bar to "Selected Counties" and press <enter>.
- b. A listing of counties, sorted by alphabetical order will appear on the screen (Figure 10). Move the highlight bar to the desired county.
- c. Site, horizon, and laboratory reports can be printed individually or in any combination for all of the characterized soils in a particular county by selecting the appropriate letter (letter options are displayed beside the pedon listing, as illustrated in Figure 10). Select any combination of reports for as many counties as you desire and then press <enter> to send the reports to the printer.

### **4. Narrative reports from data entry screen top menus**

Narrative reports can be generated from any of the data entry screen top menus (Figures 6). The Rept (Report) selection allows you to produce any combination of Site, Horizon, and Lab reports for the pedon on the screen. A report will only be produced for the pedon displayed on the entry screen. This option does allow for direct movement between all data input screens to view the data before it is printed. Follow the directions for entering the data entry screen (see Data Entry) and for selecting pedons (section A.2 under Data Entry). Select Rept from the screen top menu, choose the desired reports to be printed, and press <enter>.

## **B. Data Output to Disk**

Selected data can also be output to disk for use in various statistics and graphics programs. Data format options include dBase, Lotus 1-2-3, Minitab, and ASCII.

1. Move the selection bar to "Export Data" on the soil characterization data menu (Figure 4) and press <enter>.

A listing of the various field code names in the Sitedata, Horidata, and Labdata files (see Appendix B for a description of the field names) will appear on the screen (Figure 11). A "Help" box on the right side of the screen provides a list of cursor movement and data selection commands.

2. Select the data fields first. Move the cursor bar to each desired field and press <enter>. A listing of the selected fields will be displayed on the bottom half of the screen (Figure 12). When all of the fields have been selected, press <Ctrl> plus <End> to complete the field selection step.
3. Once you select the data fields, you will be asked "Do you wish to specify selection criteria?" This step allows you to set parameters for the selected data fields. For instance, you can specify data for certain soil series or for certain ranges of data, such as percent clay between 18 and 35 percent. For numeric fields be sure to select a range of values > 0, since missing data are assigned a 0 value and would not actually be a true 0 value. Move the cursor bar to the desired field and press <enter>. For the SERIESNAME field, a listing of soil series names will appear. For the other fields, a list of options allow you to specify a value or range of values (Figure 13).

Figure 13. Screen showing option list for specifying data field criteria for data export.

The selection criteria will be displayed on the bottom half of the screen and you will be asked whether you desire to specify additional criteria (Figure 14).

4. Once the field criteria are selected, the system will display a list of available output formats (Figure 15). Select the desired format and specify the file name (include drive, directory, and file name). The data will be copied to that file, along with a second file which provides the field code name, the structure of the field, and a brief description of the field.

## **SYSTEM SETUP**

The "System Setup" option on the main system menu (Figure 3) allows you to select different printer outputs and printer ports (Figure 16). Narrative reports can be directed to any listed printer available to the computer or to an ASCII disk file (Figure 17). The ASCII output file includes all of the printed features of the narrative reports -- site and horizon descriptions and laboratory data with headings in table format. Make the printer or ASCII output selection (be sure to specify the appropriate printer port) before generating the narrative report. To cancel or change the selection at any time during the system operation, you must return to the report or ASCII output selection screen (Figure 17).

## **CODE FILES**

The "Code Files" option from the main menu (Figure 3) allows you to edit or add to the code files for selected fields (Figure 18). Select the desired field from the Code File List menu (Figure 18). The Edit menu (Figure 19) allows you to add to, delete from, or edit the existing list of coded variables for soil series names, classification, vegetation codes, site description codes, Munsell color codes, or horizon description codes. Adding or deleting a soil name only affects the pick list that is available when a new site is added to the Site File.

## APPENDIX B. Structure and Description Files for the Pedon Program

### B-1. Site Data Structure and Description (SITEDATA.S&D)

Variable	Type	Length	Dec.	Variable Description	SITEDATA.S&D
SERIESNAME	C	18	0	Current soil series name	
CLASSTAX	C	1	0	Taxadjunct or variant( T or V code)	
DATE	C	8	0	Date described	
STATE	C	2	0	State abbreviation( PA,NY,NE etc.)	
COUNTY	C	3	0	County code number(001 to 067 for PA)	
UNIT	C	3	0	Pedon number within the county(001 to 999)	
SUBUNIT	C	1	0	Unique subdivision	
HORIZCOUNT	N	2	0	Number of horizons in the pedon	
MLRA	C	3	0	Major land resource area number	
MLRASUB	C	1	0	Major land resource area number subscript	
LATITUDE	C	7	0	Latitude in degrees, minutes, seconds; direction	
LONGITUDE	C	8	0	Longitude in degrees, minutes, seconds; direction	
SURVEYID	C	3	0	Soil survey area identification number	
MAPUNITSYM	C	5	0	Map unit symbol for map unit where pedon was collected	
NOTEID	C	5	0	Identification number for notes	
TRANSECTID	C	5	0	Identification number for transect data stop; number of transect; actual interval between transects	
YIELDID	C	5	0	Identification number for yield data	
PHOTONUM	C	5	0	Aerial photograph number	
LABSAMPLE	C	13	0	Soil Characterization laboratory sample storage number	
DESCTYPE	C	2	0	Code for the reason for the description	
PEDONTYPE	C	2	0	Code for what the pedon represents	
PREVSNAME	C	16	0	Series name when sampled	
PRCNTSLOPE	C	3	0	Percent slope at this site	
SLOPESHAPE	C	2	0	Code for shape of the slope up and down and across slope	
GEOMORPCO	C	1	0	Code for geomorphic slope component	
HILLSLOPEC	C	1	0	Code for hillslope component	
SLOPEASPCT	C	3	0	Slope aspect(0 to 360 degrees)	
SLOPLNGABV	C	4	0	Slope length from crest to site (meters)	
SLOPLNGTOT	C	4	0	Total slope length (meters)	
MICROREKND	C	1	0	Code for kind of microrelief	
MICROREAMT	C	1	0	Code for vertical change in microrelief	
MICROREPAT	C	1	0	Code for pattern of microrelief	
PDNPOSITON	C	1	0	Code for relative position of the site on slope	
REGNLPHYS	C	2	0	Code for major landform	
LOCALPHYS	C	2	0	Code for local landform	
ORDER	C	1	0	Code for soil taxonomy order	
SUBORDER	C	2	0	Code for soil taxonomy suborder	
GREATGROUP	C	2	0	Code for soil taxonomy great group	
SUBGROUP	C	4	0	Code for soil taxonomy subgroup	
PARTSIZECL	C	3	0	Code for soil taxonomy particle size class	
MINERALOGY	C	2	0	Code for soil taxonomy mineralogy class	
REACTION	C	2	0	Code for soil taxonomy reaction class	
TEMPERATUR	C	2	0	Code for soil taxonomy temperature regime	
OTHER	C	2	0	Code for soil taxonomy other family type	

**APPENDIX B (Continued)**

Variable	Type	Length	Dec.	----- Variable -----	SITEDATA.S&D
PRECIPCM	C	3	0	Annual precipitation at site in centimeters	
WATERDEPTH	C	3	0	Depth of water table when described in centimeters	
WATERDAYS	C	3	0	Duration of water table in days	
WATERKIND	C	1	0	Code for kind of water table	
LANDUSE	C	1	0	Code for kind of landuse	
STONINESS	C	2	0	Percent surface cover of rocks or stoniness class code	
HYDRALCOND	C	1	0	Code for hydraulic conductivity class	
PERMEABLTY	C	1	0	Code for permeability class	
DRAINAGE	C	1	0	Code for drainage class	
ELEVATION	C	5	0	Elevation above mean sea level in meters	
PM1WEATHER	C	1	0	Code for parent material weathering intensity	
PM1MODEDEP	C	1	0	Code for parent material mode of deposition	
PM1ORIGIN	C	2	0	Code for bedrock source of parent material	
PM2WEATHER	C	1	0	Code for parent material weathering intensity	
PM2MODEDEP	C	1	0	Code for parent material mode of deposition	
PM2ORIGIN	C	2	0	Code for bedrock source of parent material	
PM3WEATHER	C	1	0	Code for parent material weathering intensity	
PM3MODEDEP	C	1	0	Code for parent material mode of deposition	
PM3ORIGIN	C	2	0	Code for bedrock source of parent material	
PM4WEATHER	C	1	0	Code for parent material weathering intensity	
PM4MODEDEP	C	1	0	Code for parent material mode of deposition	
PM4ORIGIN	C	2	0	Code for bedrock source of parent material	
BEDRCKDIP	C	2	0	Bedrock dip in degrees(from horizontal; 0 to 90) (	
BEDRCKSTRK	C	3	0	Bedrock strike in degrees(0 to 360)	
BEDRCKFRAC	C	1	0	Code for bedrock fracture	
AIRTMPPANN	C	4	1	Average annual air temperature degrees C	
AIRTMPSUMR	C	4	1	Average summer air temperature degrees C	
AIRTMPPWTR	C	4	1	Average winter air temperature degrees C	
TEMPANNUAL	C	4	1	Average annual soil temperature degrees C	
TEMPSUMMER	C	4	1	Average summer soil temperature degrees C	
TEMPWINTER	C	4	1	Average winter soil temperature degrees C	
MOISTUREREGI	C	2	0	Code for soil taxonomy moisture regime	
WTHRSTATN	C	6	0	U.S. weather station number for representative weather station	
CONTRLSECT	C	6	0	Particle size control section upper and lower depth in centimeters	
WATEREROSION	C	1	0	Code for water erosion	
RUNNOFF	C	1	0	Code for runoff	
DH1DEPTH	C	6	0	Soil taxonomy diagnostic horizon - depth in cm	
DH1KIND	C	1	0	Soil taxonomy diagnostic horizon - kind	
DH2DEPTH	C	6	0	Soil taxonomy diagnostic horizon - depth in cm	
DH2KIND	C	1	0	Soil taxonomy diagnostic horizon - kind	
DH3DEPTH	C	6	0	Soil taxonomy diagnostic horizon - depth in cm	
DH3KIND	C	1	0	Soil taxonomy diagnostic horizon - kind	
DH4DEPTH	C	6	0	Soil taxonomy diagnostic horizon - depth in cm	
DH4KIND	C	1	0	Soil taxonomy diagnostic horizon - kind	
DH5DEPTH	C	6	0	Soil taxonomy diagnostic horizon - depth in cm	
DH5KIND	C	1	0	Soil taxonomy diagnostic horizon - kind	
FLOODFRQ	C	2	0	Code for frequency of flooding	
FLOODMONTH	C	2	0	Beginning month of flooding	
FLOODDAYS	C	2	0	Duration of flooding in days	

**APPENDIX B (Continued)**

Variable	Type	Length	Dec.	Description	SITEDATA.S&D
PONDFRQ	C	2	0	Code for frequency of ponding	
PONDMONTH	C	2	0	Beginning month of ponding	
PONDAYS	C	2	0	Duration of ponding in days	
VEG1SPECIE	C	6	0	Code for vegetation species	
VEG2SPECIE	C	6	0	Code for vegetation species	
VEG3SPECIE	C	6	0	Code for vegetation species	
VEG4SPECIE	C	6	0	Code for vegetation species	
VEG5SPECIE	C	6	0	Code for vegetation species	
VEG6SPECIE	C	6	0	Code for vegetation species	
VEG7SPECIE	C	6	0	Code for vegetation species	
VEG8SPECIE	C	6	0	Code for vegetation species	
VEG9SPECIE	C	6	0	Code for vegetation species	
VEG10SPEC	C	6	0	Code for vegetation species	
ASSOCSOIL1	C	16	0	Name of associated soil on landscape	
ASSOCSOIL2	C	16	0	Name of associated soil on landscape	
ASSOCSOIL3	C	16	0	Name of associated soil on landscape	
ASSOCSOIL4	C	16	0	Name of associated soil on landscape	
DSCRBRSNMS	C	150	0	Names of describers	
LOCATION	C	254	0	Location of pedon, free form description	
NOTES1	C	254	0	Free form site notes	
NOTES2	C	254	0	Free form site notes	
QUADSHEET	C	20	0	USGS 7 1/2 minute topographic map name	
TOWNSHIP	C	20	0	Township name	
PAPARMAT	C	5	0	Code for Penn State soil char lab parent material	
PLOWED	L	1	0	Code for was the soil plowed( Y yes : N no )	
SOILTYPE	C	36	0	Soil type (surface texture)	

**APPENDIX B (Continued)**

**B-2. Horizon Data Structure and Description (HORIDATA.S&D)**

Variable	Type	Length	Dec.	Variable Description	HORIDATA.S&D
NUMBER	C	9	0	State, County (001 to 067), pedon no. (sequential within a county)	
SERIESNAME	C	18	0	Current soil series name	
HORIZONNUM	N	2	0	Horizon number (sequential from surface down)	
UDEPTH	C	3	0	Upper depth of horizon (centimeters)	
LDEPTH	C	3	0	Lower depth of horizon (centimeters)	
HORDISCONT	C	1	0	Horizon lithologic discontinuity	
MASTERLETT	C	3	0	Horizon master letter	
HORISUFFIX	C	4	0	Horizon suffix	
LATERALEXT	C	2	0	Volume percent laterally that the horizon features occupies	
TOTALEXTNT	C	2	0	Total volume percent of feature in horizon	
AVGTHICKNS	C	3	0	Average thickness of horizon in cm	
MAXTHICKNS	C	3	0	Maximum thickness of horizon	
MINTHICKNS	C	3	0	Minimum thickness of horizon in inches	
DRYCLR1LOC	C	1	0	Location of dry color	
DRYCLR1PER	C	2	0	Percent of the matrix occupied by color	
DRYCLR1HUE	C	5	0	Munsell dry color hue

**B-3. Laboratory Structure and Description Files (LAB.S&D)**

**(a) Laboratory Data Structure and Description (LABDATA.S&D)**

Variable	Variable			LABDATA (LAB.S&D)
	Type	Length	Dec.	Description
NUMBER	C	9	0	State, County (001 to 067), pedon no. (sequential within a county)
SERIESNAME	C	18	0	Current soil series name
HORIZONNUM	N	2	0	Horizon number (sequential from surface down)
UDEPTH	N	3	0	Upper depth of horizon (centimeters)
LDEPTH	N	3	0	Lower depth of horizon (centimeters)
HORDISCONT	C	1	0	Horizon lithologic discontinuity
MASTERLETT	C	3	0	Horizon master letter
HORISUFFIX	C	4	0	Horizon suffix
RF1WTP	N	4	1	Rock fragments (>250mm [10 in.] wt. pct.)
RF2WTP	N	4	1	Rock fragments (250 to 76mm [10 to 3 in.] wt. pct.)
RF3WTP	N	4	1	Rock fragments (76 to 19mm [3.0 to 0.75 in.] wt. pct.)
RF4WTP	N	4	1	Rock fragments (19mm to 4.7mm [0.75 in. to 4.7mm] wt. pct.)
RF5WTP	N	4	1	Rock fragments (4.7 mm to 2.0 mm, wt. pt.)
RFTWTP	N	5	1	Rock fragments total wt. pct. of <2mm + >2mm material
LT2MMWTP	N	5	1	Less than 2mm wt. pct. of total soil material (<2mm + >2mm)
VCSAND	N	4	1	Very coarse sand (2.0 to 1.0 mm frac., wt. pct. of < 2.0 mm mat.)
CSAND	N	4	1	Coarse sand (1.0 to 0.5 mm frac., wt. pct. of < 2.0 mm mat.)
MSAND	N	4	1	Medium sand (0.5 to 0.25 mm frac., wt. pct. of < 2.0 mm mat.)
FSAND	N	4	1	Fine sand (0.25 to 0.10 mm frac., wt. pct. of < 2.0 mm mat.)
VFSAND	N	4	1	Very fine sand (0.1 to 0.05 mm frac., wt. pct. of < 2.0 mm mat.)
VFSAND1	N	4	1	Very fine sand (0.10 to 0.07 mm frac., wt. pct. of < 2 mm mat.)
VFSAND2	N	4	1	Very fine sand (0.07 to 0.05 mm frac., wt. pct. of < 2.0 mm mat.)
TSAND	N	5	1	Total sand (2.0 to 0.5 mm frac., wt. pct. of < 2.0 mm mat.)
TSILT	N	5	1	Total silt (0.05 to 0.002 mm frac., wt. pct. of < 2.0 mm mat.)
TCLAY	N	5	1	Total clay (< 0.002 mm frac., wt. pct. of < 2.0 mm mat.)
CSILT	N	4	1	Coarse silt (0.05 to 0.02 mm frac., wt. pct. of < 2.0 mm mat.)
CMSILT	N	4	1	Coarse+Medium silt (0.05 to 0.005 mm frac., wt. pct. of < 2.0 mm mat.)
MSILT	N	4	1	Medium silt (0.02 to 0.005 frac., wt. pct. of < 2.0 mm mat.)
MFSILT	N	4	1	Medium+Fine silt (0.02 to 0.002 frac., wt. pct. of < 2.0 mm mat.)
FSILT	N	4	1	Fine silt (0.005 to 0.002 mm frac., wt. pct. of < 2.0 mm mat.)
TCLASSL	C	4	0	Textural class (determined in the laboratory)
TCLASSF	C	4	0	Textural class (estimated in the field)
BDMCLWRF	N	4	2	Bulk density moist clod with rock fragments (g/cc, 1/3 atm. mois.)
BDMLT2MM	N	4	2	Bulk density moist <2mm material (g/cc, 1/3 atm. moisture)
BDMLT2UC	N	4	2	Bulk density moist <2mm material (core uncorrected for rock fragments; g/cc 1/3 atmos)
BDDLT2MM	N	4	2	Bulk density dry <2mm material(g/cc, oven dry)
BDGT2MM	N	4	2	Bulk density > 2mm material (rock fragments, g/cc, oven dry)
BDTSOIL	N	4	2	Bulk density total soil (g/cc ,<2mm + >2mm mat., 1/3 atm. mois.)
BDMETH	C	1	0	Bulk density method (C = clod method, R = core method)
RFTVP	N	5	1	Rock fragments total vol. pct. (calculated from weight & BD data)
PORETSOIL	N	2	0	Porosity total soil (rock fragments + fine earth) volume percent
POREL2MM	N	2	0	Porosity less < 2mm basis (fine earth only, rock fragments not incl.) vol. pct.
COLELT2MM	N	5	3	Coefficient of linear extensibility of less than 2mm material

**APPENDIX B (Continued)**

Variable	Type	Length	Dec.	Variable Description	LABDATA (LAB.S&D)
M03ACLWTP	N	5	1	Moisture content 1/3 atm. clod with rock fragments, wt. pct.	
M03ALT2WTP	N	4	1	Moisture content 1/3 atm. < 2mm wt. pct.	
M03ALT2UC	N	5	1	Moisture content 1/3 atm. < 2mm wt. pct. (core uncorrected for rock fragments)	
M15ALT2WTP	N	4	1	Moisture content 15 atm. < 2mm wt. pct.	
M3LT2BUWTP	N	4	1	Moisture content 1/3 atm. < 2mm bulk sample (not from clod or core) wt. pct.	
AWLT2MMWTP	N	5	1	Available water < 2mm wt. pct.	
AWLT2MMVP	N	5	3	Available water < 2mm volume basis (cm/cm)	
AWTSOILWTP	N	5	1	Available water total soil (rock fragments+< 2mm, wt. pct.)	
AWTSOILVP	N	5	3	Avail. water total soil (rock fragments+< 2mm, vol. basis cm/cm)	
PHWL	N	3	1	pH (1:1 water, lab)	
PHWF	N	3	1	pH (1:1 water, field)	
PHKCLL	N	3	1	pH (1:1 KCl, lab)	
PHKCLF	N	3	1	pH (1:1 KCl, field)	
PHCACL2L	N	3	1	pH (1:1 CaCl <sub>2</sub> , lab)	
PHCACL2F	N	3	1	pH (1:1 CaCl <sub>2</sub> , field)	
OCWTP	N	5	2	Organic carbon weigh percent(< 2 mm material)	
OCMETH	C	1	0	Organic carbon method (W = Walkly-Black; C = combustion)	
TN	N	5	2	Total nitrogen (Kjeldal method)	
CN	N	6	2	Carbon/nitrogen ratio	
CACO3EQ	N	5	1	Calcium carbonate equivalent (percent < 2 mm material)	
TSULFWTP	N	5	3	Total sulfur weight percent (< 2 mm material )	
CA	N	4	1	Calcium exchangeable (meq/100g)	
MG	N	4	1	Magnesium exchangeable (meq/100g)	
NA	N	5	2	Sodium exchangeable (meq/100g)	
K	N	5	2	Potassium exchangeable (meq/100g)	
TB	N	5	1	Total bases exchangeable (meq/100g)	
CAMG	N	5	1	Calcium/Magnesium Ratio	
ALKCL	N	4	1	Aluminum exchangeable with 1N KCL (meq/100g)	
EXACID	N	5	1	Extractable acidity (meq/100g)	
CECSUM	N	5	1	Cation exchange capacity sum of cation method(meq/100g)	
CECNH4	N	5	1	Cation exchange capacity ammonium acetate method(meq/100g)	
BSSUM	N	5	1	Base saturation sum of cations method(percent)	
BSNH4	N	5	1	Base saturation ammonium acetate method(percent)	
ACIDSOLK	N	6	1	Acid soluble potassium (pounds/acre K; 1.0 N HNO <sub>3</sub> method)	
FE2O3	N	4	1	Iron oxides (percent < 2 mm material)	
ALCBD	N	5	2	Aluminum extractable with CBD (percent)	
MNCBD	N	5	2	Manganese extractable with CBD (percent)	
KAOL	C	2	0	Kaolinite (percent < 2 um clay)	
ILL	C	2	0	Illite (percent < 2 um clay)	
VERM	C	2	0	Vermiculite (percent < 2 um clay)	
MONT	C	2	0	Montmorillonite (percent < 2 um clay)	
CHLOR	C	2	0	Chlorite (percent < 2 um clay)	
INTER	C	2	0	Intergrade (percent < 2 um clay)	
QUARTZ	C	2	0	Quartz (percent < 2 um clay)	

**APPENDIX B (Cont.)**

**(b) Laboratory Input Data Structure and Description (LABINPUT.S&D)**

Variable	Type	Length	Dec.	Variable Description	LABINPUT (LAB.S&D)
RF1VP	N	2	0	Rock fragments (>250mm [10 in.] vol. pct. est. in the field)	
RF2VP	N	2	0	Rock fragments (250mm to 76mm [10 to 3 in.] vol. pct. est. in the field)	
RF3VP	N	2	0	Rock fragments (76 to 19mm [3.0 to 0.75 in.] vol. pct. est. in the field)	
RF3WT	N	4	0	Rock fragments (76 to 19mm [3.0 to 0.75 in.] wt. in g, air dried)	
RF4WT	N	4	0	Rock fragments (19 to 4.7mm [0.75 in. to 4.7mm] wt. in g, air dry)	
RF5WT	N	4	0	Rock fragments (4.7mm to 2.0mm wt. in g, air dry)	
LT2MMWT	N	4	0	Less than 2mm material (< 2.0mm wt. in g, air dry)	
PSLABNUM	C	3	0	PS ( Particle size) lab no. for analysis container (fleaker and bottle)	
PSFLKWT	N	6	2	PS fleaker weight (oven dry)	
PSFLKPSOWT	N	6	2	PS fleaker plus soil wt. (oven dry after H2O2 treatment and candling)	
PSBWT20UM	N	6	3	PS bottle weight for 20 um pipette fraction (oven dry)	
PSBWT5UM	N	6	3	PS bottle weight for 5 um pipette fraction (oven dry)	
PSBWT2UM	N	6	3	PS bottle weight for 2 um pipette fraction (oven dry)	
PSBP20UMWT	N	6	3	PS bottle plus 20 um pipette fraction wt. (oven dry), incl. all <20 um mater.	
PSBP5UMWT	N	6	3	PS bottle plus 5 um pipette fraction wt. (oven dry), incl. all < 5 um material	
PSBP2UMWT	N	6	3	PS bottle plus 2 um pipette fraction wt. (oven dry), incl. all < 2 um material	
PSBLANKWT	N	5	3	PS Na hexametaphosphate blank wt. (25ml pipette fraction of 1000 ml which had 10 ml of conc. Na hex. added)	
PSLABNUM2	C	3	0	PS (Particle size) lab number for analysis container (beaker)	
VCSANDWT	N	5	2	Very coarse sand weight ( 2.0 to 1.0mm fraction) (oven dry)	
CSANDWT	N	5	2	Coarse sand weight ( 1.0 to 0.5mm fraction) (oven dry)	
MSANDWT	N	5	2	Medium sand weight ( 0.5 to 0.25mm fraction) (oven dry)	
FSANDWT	N	5	2	Fine sand weight ( 0.25 to 0.10mm fraction) (oven dry)	
VFSAND1WT	N	5	2	Very fine sand 1 weight ( 0.10 to 0.074mm) (oven dry)	
VFSAND2WT	N	5	2	Very fine sand 2 weight ( 0.074 to 0.050mm) (oven dry)	
TCLASSF	C	4	0	Textural classification estimated in the field	
CLLETTERa	L	1	0	Clod identification letter ( a,b,c etc.)	
CLWTMAIRa	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in air	
CLWTMWATa	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in water	
CLWTODAIRa	N	6	2	Clod wt. oven dry moisture content weighed in air	
CLWTODWATa	N	6	2	Clod wt. oven dry moisture content weighed in water	
CLRFWTAIRa	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in air	
CLRFWTWATa	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in water	
CLLETTERb	L	1	0	Clod identification letter ( a,b,c etc.)	
CLWTMAIRb	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in air	
CLWTMWATb	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in water	
CLWTODAIRb	N	6	2	Clod wt. oven dry moisture content weighed in air	
CLWTODWATb	N	6	2	Clod wt. oven dry moisture content weighed in water	
CLRFWTAIRb	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in air	
CLRFWTWATb	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in water	
CLLETTERc	L	1	0	Clod identification letter ( a,b,c etc.)	
CLWTMAIRc	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in air	
CLWTMWATc	N	6	2	Clod wt. moist (0.33 atm. moisture content) weighed in water	
CLWTODAIRc	N	6	2	Clod wt. oven dry moisture content weighed in air	
CLWTODWATc	N	6	2	Clod wt. oven dry moisture content weighed in water	
CLRFWTAIRc	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in air	
CLRFWTWATc	N	6	2	Clod rock fragment wt. oven dry moisture content weighed in water	
BDMETH	C	1	0	Bulk density method (C = clod method, R = core method)	

**APPENDIX B (Continued)**

Variable	Type	Length	Dec.	----- Variable -----	LABINPUT (LAB.S&D)

OCBLANKWT	N	5	3	Organic carbon blank weight (procedure without soil;grams)	
OCBWT	N	8	4	Organic carbon bottle weight	
OCBPCO2WT	N	8	4	Organic carbon bottle plus CO2 weight	
OCSOILWT	N	5	3	Organic carbon soil sample weight	
MCCNUM	C	2	0	Moisture correction can number	
MCCWT	N	6	3	Moisture correction can weight	
MCCPADSOWT	N	6	3	Moisture correction can plus air dry soil weight	
MCCPODSOWT	N	6	3	Moisture correction can plus oven dry soil weight	
MC	N	5	3	Moisture correction factor (factor to convert from air dry to oven dry weight basis)	
CACECPPM	N	4	1	Exchangeable calcium (parts per million; 0,2,5,8,10 ppm standards)	
CACECDF	N	3	0	Exchangeable calcium Dilution Factor (e.g. 2,5,10 etc.)	
MGCECPPM	N	4	2	Exchangeable magnesium (ppm; 0,0,0.4,1.0,1.6,2.0 ppm standards)	
MGCECDF	N	3	0	Exchangeable magnesium Dilution Factor (e.g. 2,5,10 etc.)	
NACECPPM	N	4	2	Exchangeable sodium (ppm; 0,0.4,1.0,1.6,2.0 ppm standards)	
NACECDF	N	3	0	Exchangeable sodium Dilution Factor (e.g. 2,5,10 etc.)	
KCECPPM	N	5	2	Exchangeable potassium (ppm; 0,2,5,8,10 ppm standards)	
KCEDDF	N	3	0	Exchangeable potassium Dilution Factor (e.g. 2,5,10 etc.)	
CECSOILWT	N	4	2	Cation exchange capacity soil weight (air dry, grams)	
EXACIDBLML	N	5	2	Extractable acidity (ml of acid used in titration of blank)	
EXACIDSOML	N	5	2	Extractable acidity (ml of acid used in titration of soil sample)	
EXACIDNORM	N	5	3	Extractable acidity (normality of acid used in the titration)	
EXACIDSOWT	N	4	2	Extractable acidity soil weight (air dry, grams)	
ALKCLSOWT	N	4	2	Aluminum exchangeable with KCL soil weight (air dry, grams)	
ALKCLPPM	N	4	1	Aluminum exchangeable with KCL (ppm; 0,2,4,6,10 ppm standards)	
ALKCLDF	N	3	0	Aluminum exchangeable with KCL Dilution Factor (e.g. 2,5,10 etc.)	
ALCBDPPM	N	4	1	Aluminum extractable with CBD (ppm; 0,2,4,6,10,20 standards)	
ALCBDDF	N	3	0	Aluminum extractable with CBD Dilution Factor (e.g. 2,5,10 etc.)	
MNCBDPPM	N	4	2	Manganese extractable with CBD (ppm; 0,0.5,1.5,3.0 standards)	
MNCBDDF	N	3	0	Manganese extractable with CBD Dilution Factor (e.g. 2,5,10 etc.)	
FECBDPPM	N	3	1	Iron oxides extractable with CBD (ppm; 0,1,3,6 ppm standards)	
FECBDDF	N	3	0	Iron oxides extractable with CBD Dilution Factor (e.g. 2,5,10 etc.)	
FECBDSOWT	N	4	2	Iron oxides extractable with CBD soil weight (air dry, grams)

## APPENDIX D. Site, Horizon, Physical and Chemical Data Tables for Pedon 014-099

Pennsylvania State University  
Soil Characterization Laboratory

S76-PA-014-099 (1-11) Linden Very Fine Sandy Loam

PAGE 1 OF 4

CLASSIFICATION: Fluventic Dystrochrept; Coarse-loamy, mixed, mesic

DATE PRINTED: 09/30/92

SOIL SERIES NAME:	Linden	SAMPLED SERIES NAME:	Linden
SOIL SURVEY NO.:	S76-PA-014-099 (1-11)	SOIL TYPE :	Very Fine Sandy Loam
DESCRIPTION TYPE:	Full pedon desc for lab characterization	LAB SAMPLE NO.:	9810 - 9817
PEDON TYPE:		CONTROL SECTION (cm):	
DIAGNOSTIC FEATURES (depth cm):			
ASSOCIATED SOILS:			
COUNTY:	Centre	MLRA:	147, Northern Appalachian Ridges and Valleys
TOWNSHIP:	Rush	USGS 7.5' QUAD SHEET:	Philipsburg
LATITUDE (D-M-S):	40-57-38-N	LONGITUDE (D-M-S):	078-09-43-W
LOCATION:	1 km E of Casanova Vill. 200 m N of Twp Rt 323 along Moshannon Creek; Centre County PA	LOCAL LANDFORM:	Flood plain
REGIONAL LANDFORM:	Ridge and valley	HILLSLOPE COMPONENT:	
GEOMORPHIC COMPONENT:		SLOPE LENGTH (total,meters):	
SLOPE LENGTH (above,meters):		POSITION ON SLOPE:	
SLOPE SHAPE (up-down,across):	,	ELEVATION (meters):	420
SLOPE ( % ):	1		
SLOPE ASPECT (degrees):	180		
MICRORELIEF (amount,pattern kind):	, ,		
PARENT MATERIAL WEATHERING:			
1.	Unweathered	PARENT MATERIAL ORIGIN:	
2.	Unweathered	1. Red acid shale	
PARENT MATERIAL MODE OF DEPOSITION:			
1.	Alluvium	2. Red acid sandstone	
2.	Alluvium	BEDROCK STRIKE (degrees):	
BEDROCK DIP (degrees):			
BEDROCK FRACTURE:			
PARENT MATERIAL (PA system): Red fine and medium textured floodplain			
FLOOD PATTERN (freq.,beg. mon.,days): , ,			
PONDING PATTERN (freq.,beg. mon.,days): , ,			
WATER TABLE (depth cm, days, kind): 240, ,			
DRAINAGE: Well drained			
EROSION: Slight			
STONINESS: Class 0			
WEATHER STATION:			
		ANNUAL	WINTER
SOIL TEMPERATURE(C):		9.1	0.0
AIR TEMPERATURE(C):		0.0	0.0
PRECIPITATION(cm):		110	
MOISTURE REGIME: Udic			
PERMEABILITY: Moderate			
HYDRAULIC CONDUCTIVITY:			
PERCOLATION RATE (in/hr):			
RUNOFF: Very slow			
PLOWED: Yes			
SUMMER			
NOTE ID#:			
NOTES: MS thesis site of Dick Cronce(1978) and Ed Stein(1977). The dark colors (N 2/0) in C4, C5 and C6 horizons appear to be Fe-Mn coatings on the sand grains and coarse fragments. Oaks, pines and several types of native grasses.			
PA CLASSIFICATION: FLUVENTIC, , DYSTR, OCHR, EPT, COARSE-LOAMY, MIXED, MESIC,			

**APPENDIX D (Continued)**

Pennsylvania State University  
Soil Characterization Laboratory

S76-PA-014-099 (1-11) Linden Very Fine Sandy Loam

PAGE 2 OF 4

CLASSIFICATION: Fluventic Dystrochrept; Coarse-loamy, mixed, mesic

DATE PRINTED: 09/30/92

- 1 Ap1-- 0 to 10 cm; dark brown (7.5YR 3/2) matrix; very fine sandy loam; weak fine granular structure and weak fine subangular blocky structure; very friable, non sticky, slightly plastic; many roots; pH 4.5; abrupt wavy boundary
- 2 Ap2-- 10 to 20 cm; dark reddish brown (5YR 3/3) matrix; very fine sandy loam; weak very fine subangular blocky structure; friable, non sticky, slightly plastic; many roots; pH 4.5; abrupt smooth boundary
- 3 Bwl-- 20 to 41 cm; reddish brown (5YR 4/4) matrix; loam; weak fine and medium subangular blocky structure; friable, slightly sticky, slightly plastic; many roots; few faint clay films in root channels and/or pores; pH 4.4; clear wavy boundary; Dark reddish brown (5YR 3/4) ped faces.
- 4 Bw2-- 41 to 56 cm; reddish brown (5YR 4/4) matrix; loam; weak coarse prismatic structure parting to weak fine and medium subangular blocky structure; friable, slightly sticky, slightly plastic; common roots; faint clay films on faces of ped; pH 4.5; clear wavy boundary; Films are on prism faces; dark reddish brown (5YR 3/3) ped faces.
- 5 BC-- 56 to 74 cm; dark brown (7.5YR 4/4) matrix; loam; weak coarse prismatic structure parting to weak medium subangular blocky structure; very friable, slightly sticky, slightly plastic; common roots; common faint clay films on faces of ped; pH 4.5; gradual wavy boundary; Films are on prism faces.
- 6 C1-- 74 to 114 cm; dark brown (7.5YR 3/2) matrix; very fine sandy loam; structureless massive; very friable, slightly sticky, slightly plastic; common roots; pH 4.4; clear wavy boundary
- 7 C2-- 114 to 140 cm; dark yellowish brown (10YR 3/4) matrix; loamy sand; structureless massive; very friable, non sticky, non plastic; few roots; pH 4.4; abrupt wavy boundary
- 8 C3-- 140 to 150 cm; dark yellowish brown (10YR 3/4) matrix, black (N 2/0) matrix; gravelly loamy sand; with many medium and coarse prominent yellowish brown (10YR 5/6) mottles; structureless single grain; loose, non sticky, non plastic; few roots; pH 4.4; 50% gray & brown acid sandstone rock fragments, 40% gravel 2 mm-1.9 cm, 10% gravel 1.9-7.6 cm; abrupt wavy boundary; black (N 2/0) coatings on gravel.
- 9 C4-- 150 to 160 cm; black (N 2/0) matrix; very gravelly sand; structureless single grain; firm, weakly cemented, non sticky, non plastic; pH 4.4; 50% gray & brown acid sandstone rock fragments, 40% gravel 2 mm-1.9 cm, 10% gravel 1.9-7.6 cm; abrupt wavy boundary
- 10 C5-- 160 to 190 cm; dark yellowish brown (10YR 4/4) matrix, black (N 2/0) matrix, strong brown (7.5YR 5/8) matrix; very gravelly sand; structureless single grain; loose, non sticky, non plastic; pH 4.4; 65% gray & brown acid sandstone rock fragments, 45% gravel 2 mm-1.9 cm, 15% gravel 1.9-7.6 cm, 5% flat cobbles 7.6-25 cm; abrupt wavy boundary; Also black (N 2/0) coatings on coarse gravel, strong brown (7.5YR 5/8) and dark reddish brown (5YR 3/4) coating on medium gravel
- 11 C6-- 190 to 282 cm; strong brown (7.5YR 5/6) matrix, black (N 2/0) matrix, red (2.5YR 5/6) matrix; very gravelly coarse sand; structureless single grain; loose, non sticky, non plastic; pH 4.4; 75% gray & brown acid sandstone rock fragments, 30% gravel 2 mm-1.9 cm, 15% gravel 1.9-7.6 cm, 25% flat cobbles 7.6-25 cm, 5% flat stones 25-60 cm
